

Trouble Shooting Guide

The key to better performance is the placement of the two units.

1. Try resetting the **Network Unit** by unplugging it and then plugging it back in.
2. If the problem persists, return system for service replacement.

1. Try moving the **Network Unit** to another room or area where you have more coverage. (Use your cell phone to find the best cellular signal).

1. Try resetting the **Coverage Unit** by unplugging it and then plugging it back in.
2. If problem persists, return system for service.

1. The signal from the wireless network is too strong to use a booster.

1. Make sure that the vents on the units are not blocked. Move the unit to a cooler area. The system will start working normally when it cools down.

1. Make sure that the vents on the units are not blocked. Move the unit to a cooler area. The system will start working normally when it cools down.

1. Try moving the units farther apart.

1. Try moving the units closer together.

1. Please call your cell phone provider.

FCC Requirements:

This is a consumer device.

Before use, you must register this device with your wireless provider and have your provider's consent. Most wireless providers consent to the use of signal boosters. Some providers may not consent to the use of this device on their network. If you are unsure, contact your provider.

You must operate this device with approved antennas and cables as specified by the manufacturer. Antennas MUST be installed at least 20 cm (8 inches) from any person.

You MUST cease operating this device immediately if requested by the FCC or a licensed wireless service provider.

WARNING: E911 location information may not be provided or may be inaccurate for calls served by using this device.

The System and the Outside Antenna (if applicable) must be installed no higher than 10 meters (32'9") above ground level.

CEL-FI.

CEL-FI PRO Quick Start Guide

Box Contents: • 1 Quick Start Guide • 1 Network Unit • 1 Coverage Unit
• 2 Power Adapters • 2 Optional Mounting Brackets

Welcome to the Cel-Fi Quickstart Guide

Follow these simple steps for a quick and easy set-up.

If you have followed the install procedures and are still seeking improved coverage, please visit the [Trouble Shooting Guide](#) section on the reverse side of the Quick Start Guide.

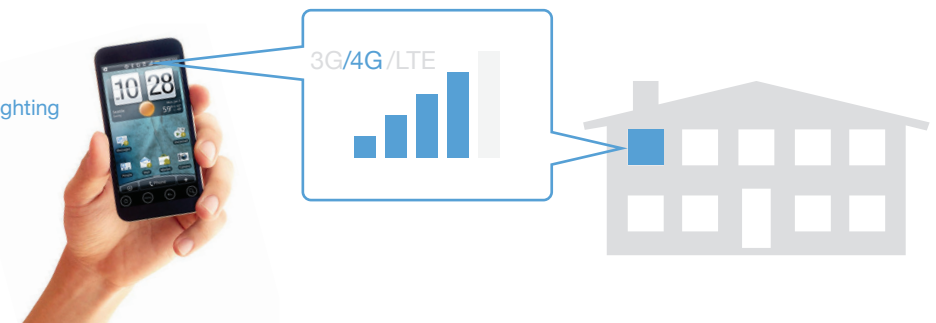

For more information and videos showing installations in different environments, please visit cel-fihelp.com.

Step 1

Find the best Cellular Signal.

For Cel-Fi PRO to work correctly, you need to have either a 3G, 4G or LTE signal. Typically, you will get the best signal upstairs near a window.

Step 2a

Place the Network Unit (NU).

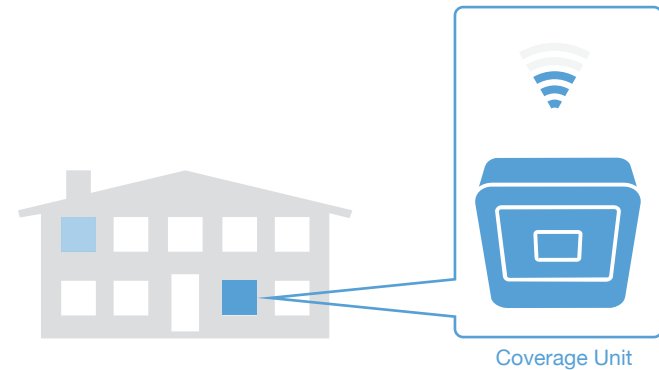

Place the NU in the location where you get the best cellular signal.

Step 2b

Place the Coverage Unit (CU).

Place the CU in the location where you need improved coverage.

Step 3

Optimize Coverage.

For best results, try moving the CU around to a few different spots. Typically, the farther the units are apart, the better coverage you will have. Although, it is possible to move the units too far apart.
